portfolio-himank-garg.vercel.app · github.com/p4bl0-26 · [LinkedIn](#) · [Codeforces: PABLO_19](#)

SUMMARY

Flutter developer who ships production apps end-to-end — UI, auth, payments, Supabase backends. Shipped a complete multi-feature app in **7 days**; currently sole developer of a marketplace app in pre-release. Proven fast, independent execution. Available immediately for deadline-driven remote work.

EDUCATION

B.Tech, Computer Science & Engineering

The LNM Institute of Information Technology (LNMIIT), Jaipur · 2025 – 2029

EXPERIENCE

Flutter Developer — BuildBazaarX

June 2026 – Present · Construction & interior-design marketplace (DPIIT-recognized startup)

- **Sole developer of the BuildBazaarX Professional app** — designed and built the complete UI (dashboard, profile management, responsive layouts with dark/light theming), the full authentication flow, and Supabase integration; currently in **pre-release**, targeting Play Store publication. (github.com/p4bl0-26/Builder_professional)
- Architected the Flutter client to mirror the production React web platform — reusable component architecture, screens kept in sync with the existing Supabase schema so web and mobile share one backend.
- On the **Seller app**: implemented the end-to-end **Razorpay payment flow** (checkout through confirmation) and built secure authentication for seller onboarding and login. (github.com/Rishit0612/BuildBazaarX_app)

PROJECTS

Sortd — Campus Utility App (built in 1 week)

Flutter · Supabase | github.com/Rishit0612/Sortd

- Designed, built, and shipped a complete multi-feature student app in **7 days** — UI, Supabase backend, and business logic end-to-end.
- Expense tracker and **loan tracker with automated WhatsApp reminders** — the app automatically messages the borrower on a user-set due date, removing the awkwardness of chasing friends for money.
- Quiz tracker for upcoming tests and a centralized semester study-materials hub, replacing scattered WhatsApp groups and drive links.

GradeGravity — LNMIIT SGPA Calculator (live, in use by students)

Web · Deployed on Vercel | [Live: gradegravity-lnmiit.vercel.app](https://live.gradegravity-lnmiit.vercel.app) · [GitHub](#)

- Built and deployed a branch- and semester-aware **SGPA calculator for LNMIIT B.Tech students** — encodes the actual curriculum (courses, credits) per branch per semester, so students just pick and enter grades.
- Handles edge cases like flexible semesters (thesis/internship/electives) with manual course rows, S/F courses, and weighted grade-point computation with a full per-course breakdown.

HACKATHON PROJECTS

Optimus — AI Chief of Staff · Vibe2Ship Hackathon

Next.js · Flutter · Gemini · Supabase | [Live: optimus-gray.vercel.app](https://live.optimus-gray.vercel.app)

- Shipped a working cross-platform product (Next.js web dashboard + Flutter companion app) in **48 hours**: Gemini-powered AI discovers commitments from calendars and messages, predicts schedule risks before they happen, and generates execution plans so users never miss a deadline.

Veritas — Content Authenticity Platform · Nexora'26 Hackathon

Blockchain · AI · Next.js | [Live: veritas-beta-green.vercel.app](https://live.veritas-beta-green.vercel.app)

- Digital-content authenticity platform: SHA-256 file fingerprinting anchored on-chain for immutable proof of origin, AI-generated plain-English tamper explanations, and QR-code verification of any document in under three seconds.

TECHNICAL SKILLS

Mobile	Flutter (primary), Dart, Android
Backend	Supabase (auth, database, storage), Razorpay payments, SQL, Node.js, REST APIs
Web	React, Next.js, TypeScript, Tailwind CSS
Languages	Dart, C++, Python, JavaScript, TypeScript
AI / Other	Gemini & OpenAI APIs, Web3/Blockchain, Git & GitHub

ACHIEVEMENTS

- Cleared **Round 1 of Nexora'26 Hackathon** with Veritas — selected from a field of **200+ participants**.
- Solved **138 problems on Codeforces** ([PABLO_19](#)) with a **38-day daily streak** — consistent, disciplined practice.
